

Ragul Radhakrishnan

Senior QA Engineer

+91-7812826634 | ragulkrish.rk95@gmail.com | Kumbakonam, India | Experience: 8 Years 7 Months

Senior QA Engineer with 8.5+ years of experience in Test Automation, Functional Testing, API Testing, and Performance Testing across Banking and Healthcare domains. Strong expertise in Playwright automation, REST API validation, SQL database testing, and performance testing using Apache JMeter. Experienced in Agile environments, CI/CD testing workflows, and defect management using JIRA.

SKILLS

- Functional Testing
- Automation Testing
- JIRA
- Ready API
- TypeScript
- Github
- X-Ray
- Database Testing
- Load Testing
- Testrail
- Postman API
- Python
- Ci/Cd
- API Automation
- API Testing
- Playwright
- JMeter
- Swagger API
- GIT
- Jenkins
- Test Automation Framework

CERTIFICATION

- Microsoft Azure Fundamentals: AZ-900
- ISTQB Foundation Level
- ISTQB Advanced Level Test Automation Engineer

WORK EXPERIENCE

Senior QA Engineer - Guidehouse

May 2022 - Present

- Led end-to-end testing of Healthcare Application, validating patient billing workflows, insurance claim processing, payment reconciliation, and regulatory compliance requirements.
- Automated critical regression scenarios using Playwright, covering invoice generation, claim validation, payment posting, and role-based access control, improving release efficiency and reducing manual effort.
- Performed API testing using ReadyAPI, validating REST services for claim submission, eligibility verification, billing calculations, and ensuring data integrity across integrated healthcare systems.
- Executed performance and load testing using JMeter and LoadNinja, simulating concurrent users and high-volume billing transactions to ensure system stability, response time optimization, and SLA compliance.
- Conducted database validation using SQL and collaborated with Dev/BA teams in Agile environment, ensuring accurate billing calculations, defect root cause analysis, and zero critical production leakage.

Technical Associate - City Union Bank

Jan 2018 - May 2022

- Performed end-to-end manual testing of Loan Management and AML Transaction Monitoring applications, validating loan origination, underwriting workflows, EMI calculations, repayment schedules, and regulatory compliance rules.
- Designed and executed detailed test cases for AML transaction monitoring, validating suspicious transaction alerts, threshold breaches, sanctions screening, and customer risk profiling based on defined compliance rules.
- Validated complex loan scenarios, including interest calculation (flat/reducing), pre-closure charges, foreclosure processing, penalty computation, and repayment adjustments.
- Conducted system integration and data validation testing, verifying data consistency between Core Banking Systems, AML engines, and reporting modules using SQL queries.

PROJECTS

Metrix	48 Months
A revenue cycle management application and an account receivable management tool for hospital and doctor offices and also a large scale ,multi user application with complex event and task management.	
LAPS (Lending Automation Processing System)	24 Months
Lending Automation Processing System is a Loan automation system,provides higher level of accuracy of MIS data, apart from timely processing of credit proposals.	
Ratify	12 Months
Ratify is an enterprise-level billing platform developed to streamline customer billing lifecycle management. The application handles invoice processing, taxation logic, discount calculations, payment reconciliation, and financial reporting with high accuracy and performance efficiency.	
Compliance	24 Months
Transaction Monitoring Application is a financial compliance system designed to detect, monitor, and report suspicious transactions in accordance with regulatory standards such as KYC and global AML guidelines.
